About me

Sam Doane

Senior in MechE

Second year in Makers

A(chord)ion last year (shoutout)

From Seattle

Hobbies: I love music (concerts, playing, producing) and the outdoors

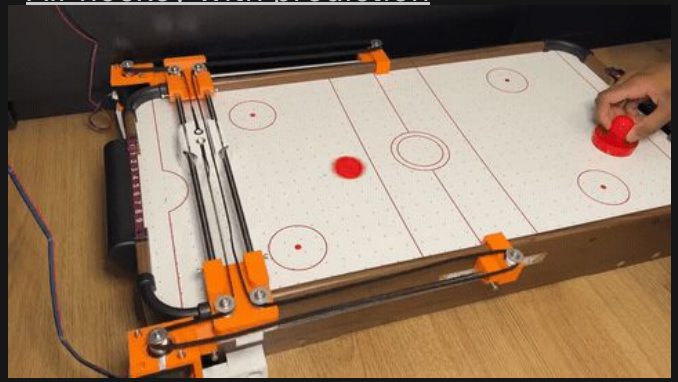

Inspiration

Ronaldo vs. a robot goalie

Air hockey with prediction

Fast reactions

A robot you can play against

The idea

Build a robotic opponent that tracks the puck, defends its goal, and returns shots.

Camera Track the puck’s motion.

Controller Predict an interception.

Gantry Move the paddle.

Subteams

Mechanical

Table, gantry, paddle

CAD and fabrication

Motor sizing

Electrical

Drivers and power

Sensors and wiring

Embedded control

Software

Puck tracking

Trajectory prediction

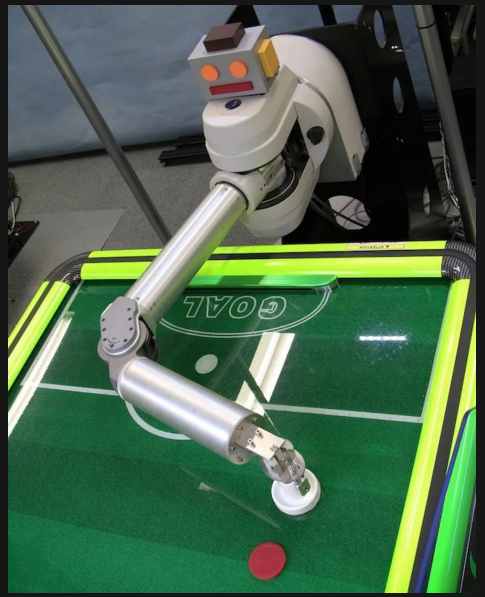

Simulation and RL

Rough Schedule

DECEMBER SHOWCASE

Fall semester

Assembled table/gantry and basic defense using trajectory prediction.

MAY SHOWCASE

Spring semester

A playable opponent that can defend and return shots.

Why join?

01 **Something fun to play**

Bring your friends to try to beat it.

02 **We will become friends**

Hang out outside of GM and get food and become friends yay

03 **Learn different skills**

Try something new; lots of different cool skills to learn

Thank You
