PUZZLE BOX

ABOUT ME

Year: Junior
Major: Mechanical Engineering
Hometown: Seattle, Washington
Interests: Board games, escape rooms, collecting four leaf clovers

PROJECT INSPIRATION

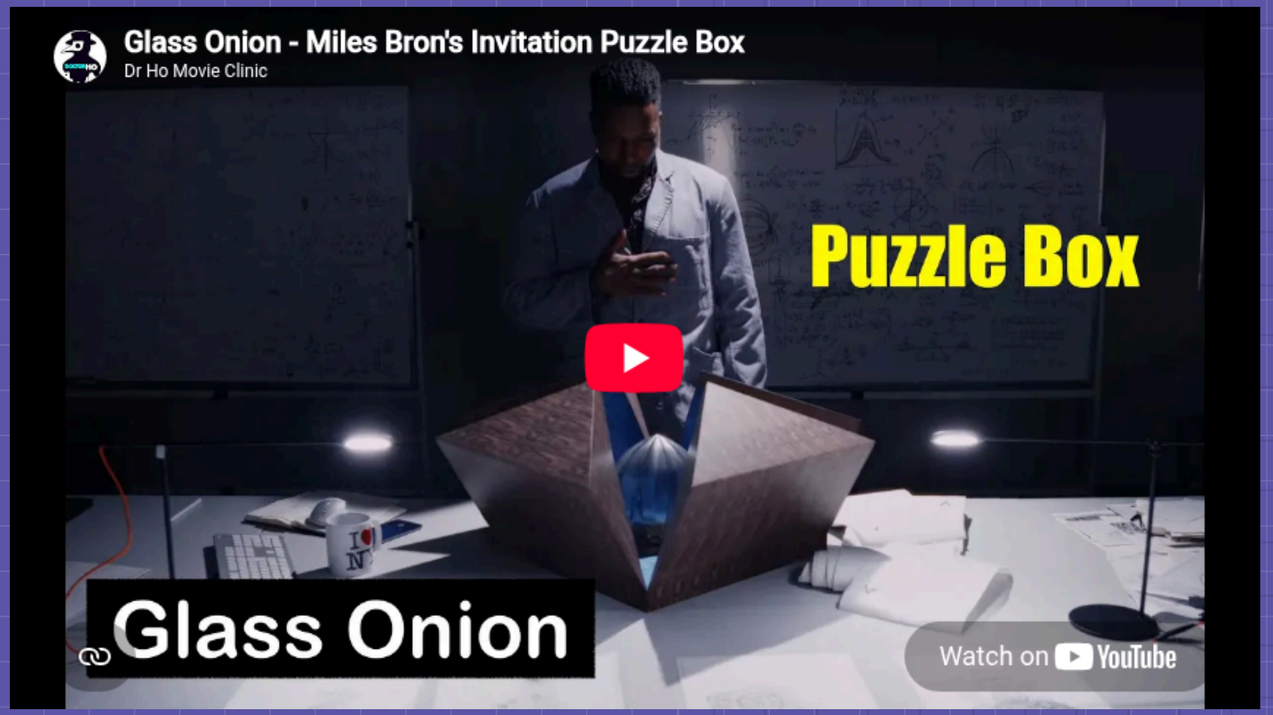

THE IDEA

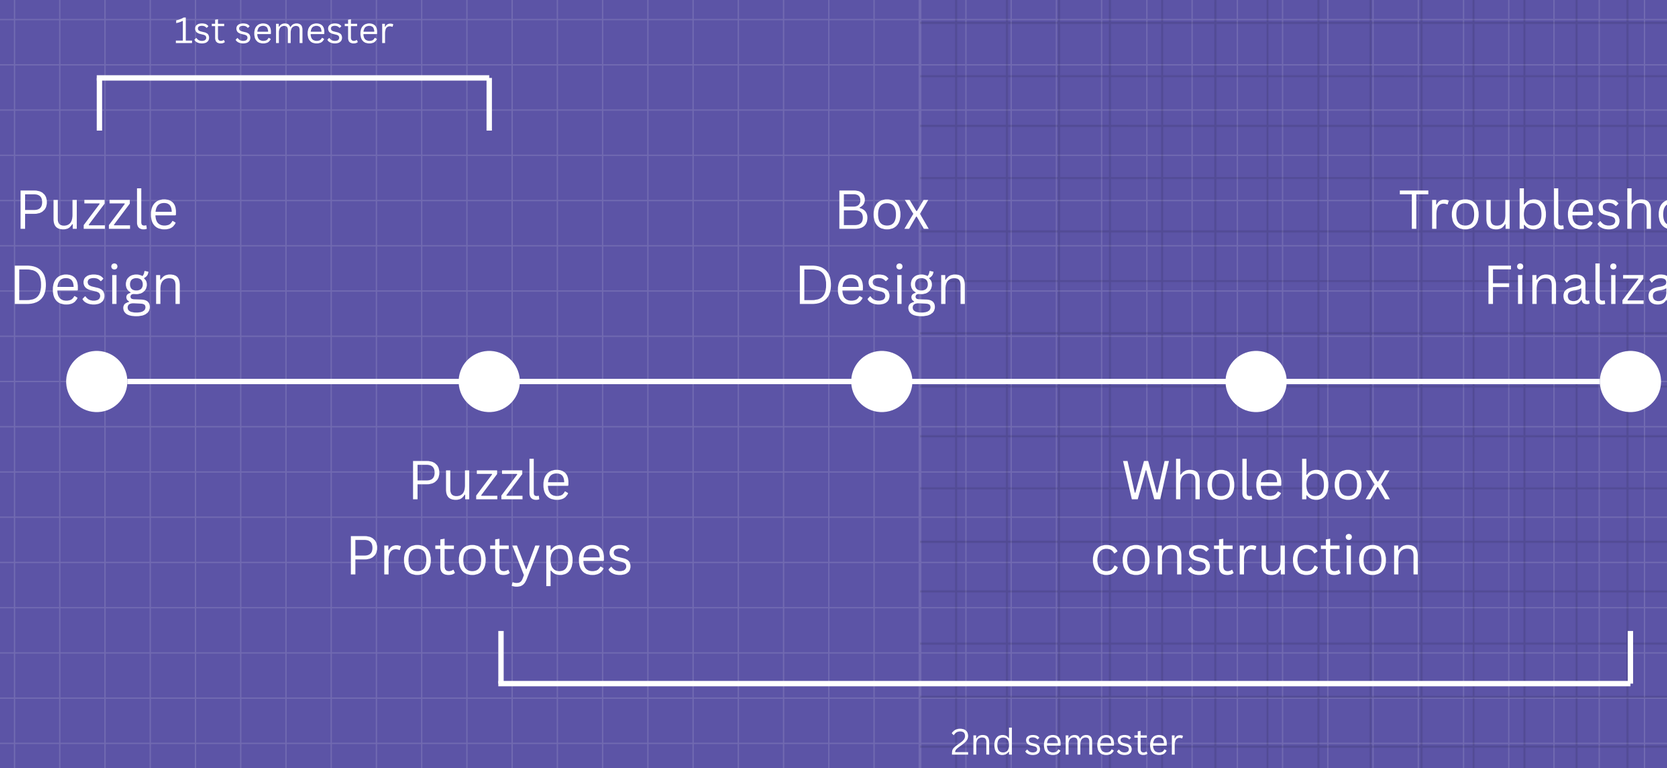

But with our own (better) puzzles!

No instructions!

We’ll design and box and puzzles together so there are lots of possibilites for the final product

PROJECT TIMELINE

SUBTEAMS

Mechanical: Physical design of box and design of puzzle mechanisms

Electrical: Design and integrate electrical components of puzzles

CS: Develop the software to implement puzzle-state logic and trigger physical outputs

A lot of the actual work that we will be doing will depend on the puzzles we design – we'll get to build what's interesting to us!

After we have designed the puzzles as a team, we'll work on multiple puzzle prototypes at a time so that each member of the team can work on a puzzle that best suits their strengths and interests.

WHY JOIN MY TEAM?

- Lots of opportunties for creativity
- You get a really big say in what the final product looks like
  - You therefore also get a really big say in what kind of work you do
- Your friends can play with your project once we’re done
- We can make a final working product happen
- Team bonding! (escape room maybe?)

THANK YOU!
